

TEPEZZA™ (teprotumumab-trbw)
Frequently Asked Questions

Horizon Therapeutics, the maker of TEPEZZA, prepared this document to address questions from the Thyroid Eye Disease community. Horizon is a biopharmaceutical company focused on improving the lives of people living with rare diseases, including Thyroid Eye Disease, through its medicines and deep support for patient communities.

Note: If you choose to share or post these FAQs, please share the full document and not select pieces of it, in order to comply with regulatory guidelines.

Questions about TEPEZZA? Talk to a Horizon Nurse Advocate. Call 1-833-483-7399, Mon-Fri, 8 a.m.-8 p.m. EST.

Nurse Advocates do not provide individual patient care or medical advice. After speaking with a Nurse Advocate, be sure to talk with your doctor about your treatment options, including TEPEZZA. You should talk to your doctor about whether TEPEZZA is right for you.

1. What is TEPEZZA?

TEPEZZA is the first and only medicine FDA-approved to treat Thyroid Eye Disease. Unlike other medicines you and your doctor may have tried, TEPEZZA treats the cause of Thyroid Eye Disease. When you have Thyroid Eye disease, a switch behind your eye, called a receptor, is turned on that causes redness and swelling. This can also make your eyes bulge. TEPEZZA is the only medicine that blocks this receptor to treat Thyroid Eye Disease at its source. Learn more at www.TEPEZZA.com.

2. What is Thyroid Eye Disease?

Thyroid Eye Disease is a vision-threatening autoimmune disease that often occurs in people living with Graves' disease; however, it is a different disease that must be managed separately. Common symptoms of Thyroid Eye Disease include double vision, bulging eyes, dry eyes, eye pain, eyelid redness and swelling, teary eyes, light sensitivity and vision changes.

3. How do I know if I have Thyroid Eye Disease?

If you are at risk for Thyroid Eye Disease, such as living with Graves' disease, you should pay attention to changes in your eyes, such as pain, redness, light sensitivity, bulging eyes, blurry vision or double vision. If you experience these symptoms, visit an ophthalmologist or oculoplastic surgeon to get an eye exam.

4. How do I know if TEPEZZA is right for me?

If you are experiencing symptoms of Thyroid Eye Disease or have been diagnosed with the disease, you should speak with your physician about potential treatment options.

5. In what form is TEPEZZA going to be made available?

TEPEZZA is an IV (intravenous) treatment given once every three weeks for a total of eight treatments. This means it is delivered through a needle that is placed in your arm. The first and second treatments will last about 90 minutes. The remaining six treatments will take about 60 minutes each, but could be longer depending on how you respond to the medicine.

6. If my doctor decides TEPEZZA is right for me, where will I receive treatment?

Your insurance provider may assign a location where you will get your TEPEZZA or may give you several to choose from. Your doctor may also give you information about where you can get TEPEZZA. This could be your doctor's office, an infusion center that specializes in giving IV medicines or your home. Regardless of the location, a trained professional will give you your TEPEZZA. This is usually a registered nurse or a nurse practitioner.

7. How soon will TEPEZZA be available?

You can start talking to your doctor about TEPEZZA now. If you and your doctor decide that TEPEZZA is right for you, it may take anywhere between one and three months to begin treatment, which will vary based on your individual circumstances.

8. Where do I go if I need support when taking TEPEZZA?

If you and your doctor decide TEPEZZA is right for you, you can get your own Patient Access Manager (PAM) by calling 1-833-4MY-TED1 (833-469-8331) Monday-Friday, 8 a.m. to 8 p.m. EST. PAMs are trained professionals who understand your condition and what you may be going through. They also know the world of insurance and can help you navigate it. PAMs are dedicated to helping you start and move through treatment with support and care.

9. How much will I pay for treatment with TEPEZZA?

Horizon offers support and assistance so that eligible patients with Thyroid Eye Disease are able to receive TEPEZZA regardless of their ability to pay. Horizon Patient Services makes the extra effort to help deliver the lowest cost, regardless of your insurance coverage.

10. Is TEPEZZA available outside of the United States?

TEPEZZA was approved by the U.S. Food and Drug Administration and therefore is currently only available in the United States. Horizon is evaluating next steps for other countries and will share updates as they are available.

11. Will there be enough supply of TEPEZZA to meet the potential patient demand?

Yes. Horizon is investing significantly into the research, development and manufacturing of TEPEZZA. Part of this investment includes our efforts to manufacture and supply a consistent and adequate supply of TEPEZZA for people living with Thyroid Eye Disease.

TEPEZZA is a type of medicine called a "biologic." It is one of many biologic treatments that are FDA approved and available today. Biologics require a more complex manufacturing process as they are produced using living cells. Manufacturing sufficient quantities requires an incredibly complex, time-consuming and environmentally sensitive process. The rigorous safety controls and quality measures we maintain help ensure we can deliver a consistent medicine to patients.

USE

TEPEZZA is a prescription medicine used to treat Thyroid Eye Disease.

IMPORTANT SAFETY INFORMATION

What is the most important information I should know about TEPEZZA?

Infusion reactions can happen during or within 24 hours after your infusion of TEPEZZA. If you have a reaction while receiving TEPEZZA, your doctor or nurse will slow or stop your infusion and treat your reaction. If you have a severe infusion reaction, your doctor may stop your treatment completely.

Tell your doctor or nurse right away if you have any of these symptoms during or after your treatment with TEPEZZA:

- High blood pressure
- Fast heartbeat
- Redness of the face/Feeling hot
- Difficulty breathing
- Headache
- Muscle pain

If you have inflammatory bowel disease (IBD), such as Crohn's disease or ulcerative colitis, TEPEZZA may make your IBD symptoms worse. Symptoms of worsening IBD may include: an increased number of loose stools with stomach pain or cramps, and blood in your stools. After each TEPEZZA infusion, tell your doctor right away if you have worsening IBD symptoms.

TEPEZZA may cause an increase in your blood sugar. Before starting treatment with TEPEZZA, tell your doctor if you are currently being treated for diabetes, know your blood sugar is high, or have been diagnosed with diabetes. It is important for you to take your treatments and follow an appropriate diet for glucose control as prescribed by your doctor.

Before receiving TEPEZZA, tell your doctor if you:

- Have inflammatory bowel disease (Crohn's disease or ulcerative colitis).
- Are currently being treated for diabetes, have been diagnosed with diabetes, or know your blood sugar is high.
- Are pregnant or plan to become pregnant. TEPEZZA may harm your unborn baby. Tell your doctor if you become pregnant or suspect you are pregnant during treatment with TEPEZZA.
 - Women who are able to become pregnant should use an effective form of birth control (contraception) prior to starting treatment, during treatment and for at least 6 months after the final dose of TEPEZZA.
- Are breastfeeding or plan to breastfeed. It is not known if TEPEZZA passes into your breast milk. Talk to your doctor about the best ways to feed your baby during treatment with TEPEZZA.
- Tell your doctor about all the medicines you take, including prescription and over the counter medicines, vitamins, dietary and herbal supplements. Know the medicines you take. Keep a list of them to show your doctor and pharmacist when you get a new medicine.

What are the possible side effects of TEPEZZA?

The most common side effects of TEPEZZA include muscle cramps or spasms, nausea, hair loss, diarrhea, feeling tired, high blood sugar, hearing problems, taste changes, headache, and dry skin.

This is not a complete list of all possible side effects. Tell your doctor or treatment team if you have any side effect that bothers you or that does not go away.
